PATENT Attorney Docket No. 61938 Express Mail Label No. EV 334813625 US

What is claimed is:

- An apparatus for operating on at least substantially planar materials comprising:

   a body having at least one edge configured for temporarily accommodating
   instrumentation for at least one of marking, cutting or scoring;
- a head in communication with the body, the head including at least one lateral portion extending beyond the body; and

at least two rollers along the at least one lateral portion, the rollers oriented substantially coplanar to each other to define a first plane.

- 2. The apparatus of claim 1, wherein the body is oriented substantially perpendicular to the first plane defined by the rollers.
  - 3. The apparatus of claim 2, wherein the body is attached to the head.
- 15 4. The apparatus of claim 1, wherein the at least two rollers include wheels.
  - 5. The apparatus of claim 1, wherein the at least one lateral portion includes two lateral portions of the head extending beyond the body.
- 20 6. The apparatus of claim 5, wherein the two lateral portions are oppositely disposed with respect to each other.
  - 7. The apparatus of claim 6, wherein the at least two rollers include wheels.

- 8. The apparatus of claim 1, wherein the body configured at a plurality of positions for temporarily accommodating instrumentation for at least one of marking, cutting or scoring, includes a plurality of notches cut into the at least one edge of the body.
- 9. The apparatus of claim 1, wherein the at least two rollers each extend beyond the head.
- 10. The apparatus of claim 8, wherein the body includes indicia corresponding to each ofthe notches cut into the at least one edge.
  - 11. The apparatus of claim 10, wherein the indicia are proximate to the at least one edge.
- 12. The apparatus of claim 1, wherein the at least one edge configured for temporarily
  accommodating instrumentation for at least one of marking, cutting or scoring, includes
  one edge.
  - 13. An apparatus for operating on at least substantially planar materials comprising:
    a body having at least one edge configured for temporarily accommodating
    instrumentation for at least one of marking, cutting or scoring;
    - a head attached to at least a portion of body, the head including at least one lateral portion extending beyond the body; and

at least two rollers along the at least one lateral portion, the rollers oriented substantially coplanar to each other to define a first plane.

- 14. The apparatus of claim 13, wherein the head includes a slot for receiving the body, the slot proximate to the at least one lateral portion.
  - 15. The apparatus of claim 13, wherein the body is oriented substantially perpendicular to the first plane defined by the rollers.
- 10 16. The apparatus of claim 13, wherein the at least two rollers include wheels.
  - 17. The apparatus of claim 13, wherein the at least one lateral portion includes two lateral portions of the head extending beyond the body.
- 15 18. The apparatus of claim 17, wherein the slot is intermediate the two lateral portions.
  - 19. The apparatus of claim 17, wherein the at least two rollers include wheels.
- 20. The apparatus of claim 13, wherein the body configured at a plurality of positions for
   temporarily accommodating instrumentation for at least one of marking, cutting or
   scoring, includes a plurality of notches cut into the at least one edge of the body.

Attorney Docket No. 61938

Express Mail Label No. EV 334813625 US

- 21. The apparatus of claim 19, wherein the at least two rollers each extend beyond the head.
- 22. The apparatus of claim 20, wherein the body includes indicia corresponding to each
  of the notches cut into the at least one edge.
  - 23. The apparatus of claim 22, wherein the indicia are proximate to the at least one edge.
- 24. The apparatus of claim 13, wherein the at least one edge configured for temporarily
   accommodating instrumentation for at least one of marking, cutting or scoring, includes one edge.
  - 25. A method for operating on at least substantially planar materials comprising: providing an apparatus comprising:

a body having at least one notch along an edge, the notch for temporarily accommodating instrumentation for at least one of marking, cutting or scoring;

a head in communication with the body, the head including at least one lateral portion extending beyond the body; and

at least two rollers along the at least one lateral portion, the rollers oriented substantially coplanar to each other to define a roller plane, the roller plane at least substantially perpendicular to a plane defined by the edge of the body including the at least one notch;

placing the rollers of the at least one lateral portion into contact with the top surface of an at least substantially planar material;

providing an instrument into the at least one notch; and moving the apparatus along the top surface of the at least substantially planar material.

- 26. The method of claim 25, wherein moving the apparatus along the top surface includes the maintenance of contact between the rollers and the top surface.
- 10 27. The method of claim 25, wherein the instrument includes a marking tool.
  - 28. The method of claim 25, wherein the instrument includes a scoring tool.
  - 29. The method of claim 25, wherein the instrument includes a cutting tool.
